

GitLab - Remove Users

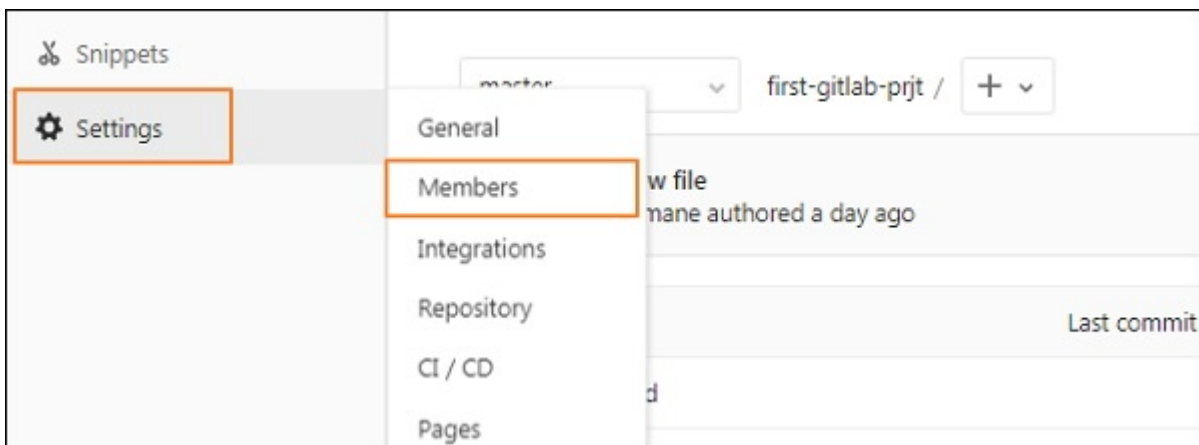

In this chapter, we will discuss about how to remove users from a project in the GitLab.

Steps for Removing User

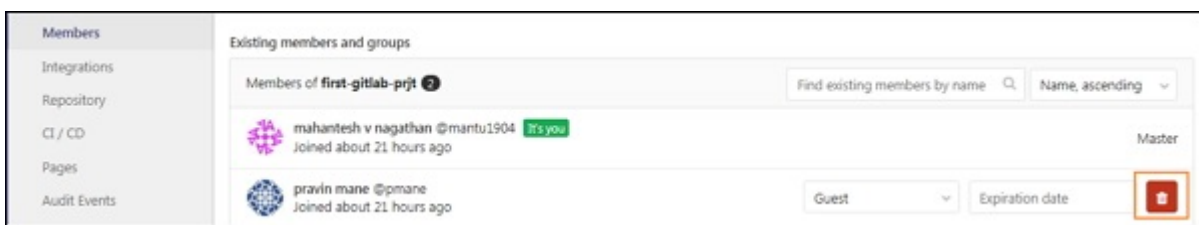

Step 1 – Login to your GitLab account and go to your project under *Projects* section –

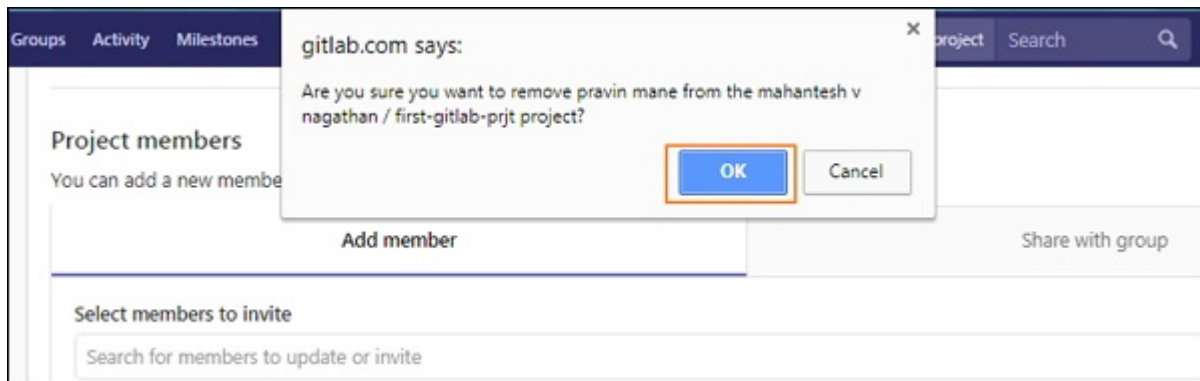

Step 2 – Now, click on the *Members* option under *Settings* tab –

Step 3 – You will see the list of users under *Existing members and groups* section and click on the delete option at right side to remove the user from project –

Step 4 – After clicking remove button, it will display a pop-up window saying whether to remove the selected user from the project or not. Click on *Ok* button to remove the user.

Step 5 – Now, it will display the success message after removing the user from the project as shown in the image below –
