# GitLab - Create Issue

In this chapter, we will discuss about how to create an issue in a project −

Step 1 − Login to your GitLab account and go to your project under *Projects* section −

Step 2 − Go to *Issues* tab and click on the *New issue* button to create a new issue as shown below −

Step 3 − Now, fill the information such as title, description and if you want, you can select a user to assign an issue, milestone(refer this chapter   for more information), labels upon operation or could be choose by developers themselves later.

Step 4 − Click on the *Submit issue* button and you will get an overview of an issue along with title and description as shown below −
